Identifiers-\*Manpower Development and Training Act Programs, MDTA Programs

Information regarding programs under Section 241 of the Manpower Development and Training Act which provides training for redevelopment area residents is presented. Appropriations increased from \$6,500,000 in 1965 to \$24,000,000 in 1967. Training costs declined in 1964 and 1965 compared to 1963 but were doubled in 1966 because of an extension of the time for which training allowances could be paid. Equipment costs rose from 10.58 percent of the training costs in 1963 to 18.02 percent in 1966 due to equipping undeveloped programs and programs for highly skilled occupations. A total of 48,644 persons received training during the four fiscal years. New Jersey, Ohio, Mississippi, Puerto Rico, Pennsylvania, New York, Wisconsin, Kentucky, Washington, and Alaska had 69 percent of the trainees in fiscal 1966. The five predominant occupations in numbers of people trained were nurse aide and orderly, sewing machine operator, welder, machine tool operator, and clerk stenographer. During the first half of 1967 there was an increase in the number of proposals for on-the-job training programs, and more proposals included basic education. Training under the program is basically sound and is accomplishing its purpose of training unemployed and underemployed workers in economically distressed areas. Tables and charts illustrate the data. (EM)

## FOREWORD

The purpose of this report is to offer an insight regarding Manpower Development and Training under Section 241 (Redevelopment Area Residents) during fiscal years 1963 through 1966. The data was obtained from yearly reports published by the Department of Health, Education, and Welfare's fiscal office; from IBM tabulated print-outs; from the Department of Labor; and from forms OE-4020 and OE-4167 filed in the Division of Manpower Development and Training. In comparing final tabulations from these three sources of information, certain discrepancies were noted. These discrepancies are minor and are considered insignificant because the purpose of this report is to provide a general overview rather than an exact statistical analysis of training activities.

## SUMMARY

There has been a significant increase in the RAR appropriation from fiscal year 1965, (\$6,500,000) to fiscal year 1967, (\$24,000,000) even though the appropriations for training under this section of the Act are small compared to those of the regular Manpower Program.

Training costs declined in fiscal years 1964 and 1965 as compared to fiscal year 1963, but they more than doubled in fiscal year 1966. In large measure, this resulted from recent implementation of a manpower policy to extend from 16 to 36 the number of weeks for which training allowances may be paid. In each fiscal year, the percentage of training costs relative to the total appropriation has declined; the total decrease from fiscal year 1963 is 14.35 percent.

Equipment costs have increased steadily from 10.58 percent of the training costs in fiscal year 1963 to 18.02 percent in fiscal year 1966. This increase is a result of two factors: (1) providing training programs in areas which were not equipped to offer training; and (2) providing training in more highly skilled occupations. The increase in equipment costs over the past four fiscal years has been a small percentage of each year's appropriation; in fiscal year 1966, equipment costs represented only 6.52 percent of the appropriation.

During the four fiscal years 48,644 persons received training. The fiscal year trainee totals reveal a decline from fiscal year 1963 through 1965. An exception to this was in fiscal year 1966, which showed that 756 fewer individuals were trained during that year than in fiscal year 1963. The decline in the number of persons trained in fiscal years 1964 and 1965 cannot be explained. The increase in fiscal year 1966 over fiscal year 1965 is due to a

\$15,500,000 increase in the appropriation authorized. The increase in the number of trainees, although not in proportion to the increase in the appropriation, can probably be explained by the previously mentioned increase in length of training programs, which has not only limited the number of persons who could be trained, but also increased the cost for allowances.

A definite geographic pattern has been established for training under RAR. A number of the trainees (67.68 percent) were in Regions II, III, V, and VII. Analysis of the data reveals that fifteen States account for 67.97 percent of the people trained and that twelve of these States are in the regions accounting for 67.68 percent of the number of trainees. The remaining three States are in Region IV.

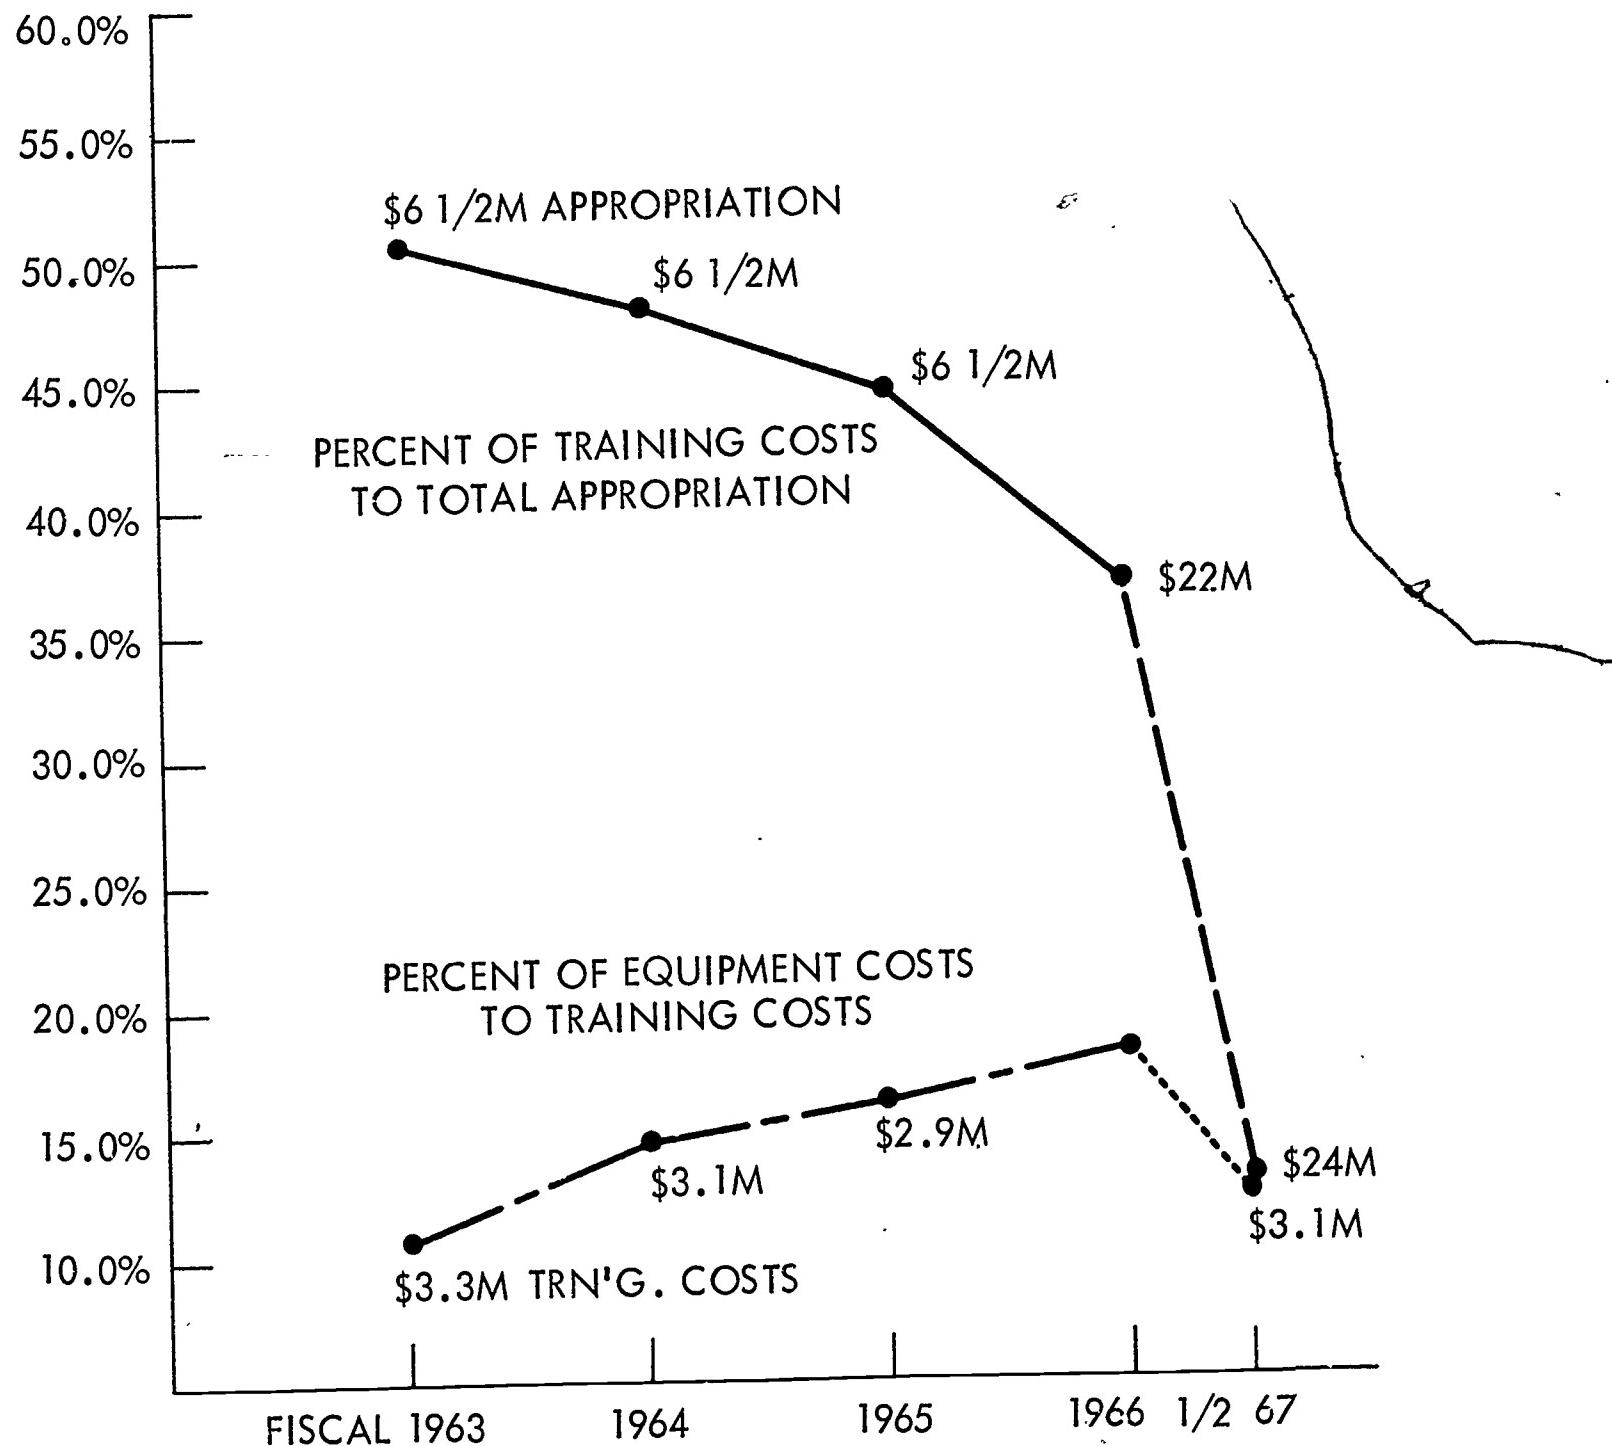

Of the training under RAR 63.35 percent has been conducted in twenty major occupations. The five predominate occupations in terms of number of people trained were Nurse Aide and Orderly (7,891), Sewing Machine Operator (3,411), Welding (3,192), Machine Tool Operator (2,804), and Clerk Stenographer (2,289).

A lack of consistency in training time for specific occupations suggests a need for national leadership in curriculum development. It is recognized that the length of time needed for training is determined by the occupational requirements and by the characteristics of the trainees. Nevertheless, it is felt that the development of curriculum materials appropriate to the educational level of the trainees would assist in promoting training programs of higher quality.

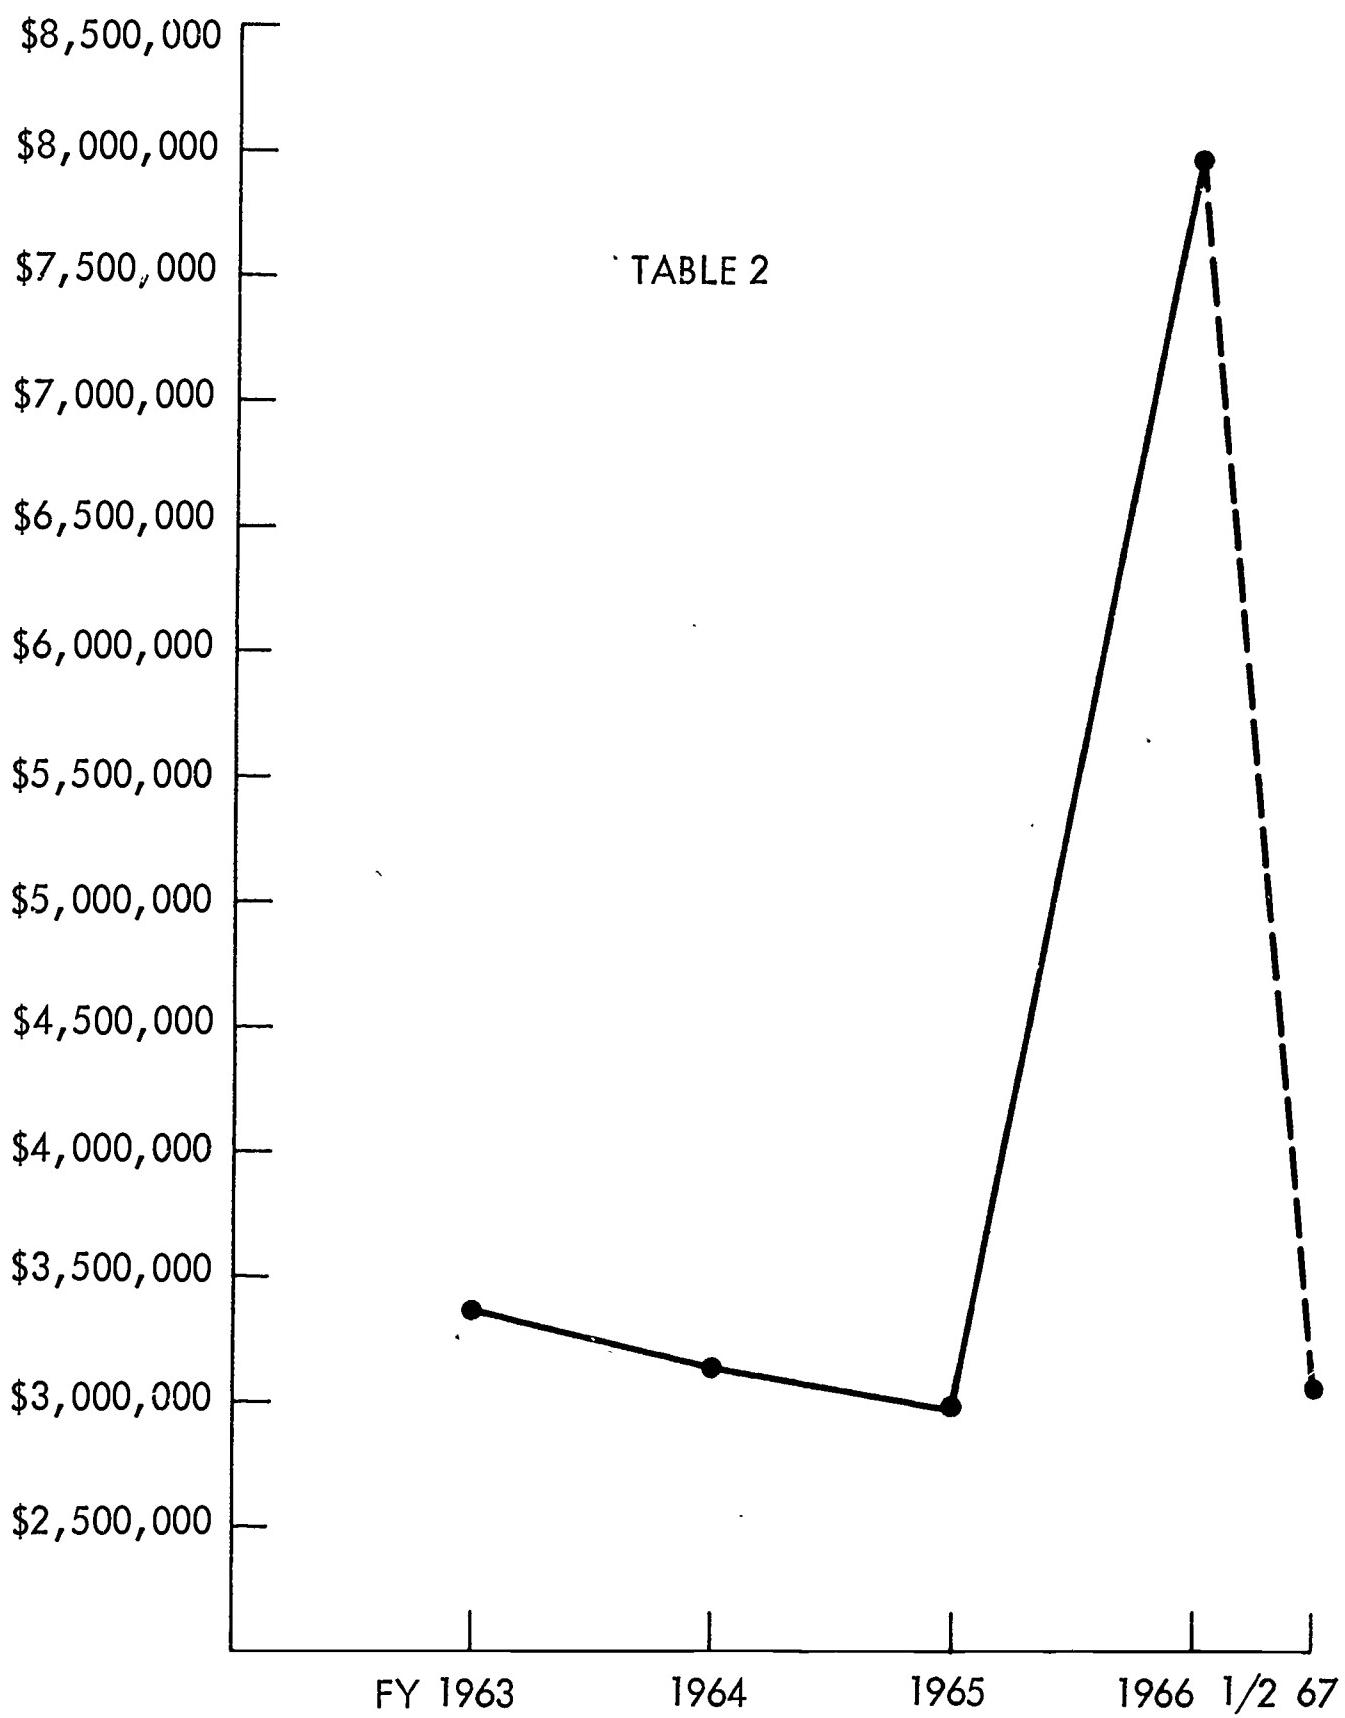

Training during the first six months of fiscal year 1967 appears to be following the trends established during the preceding fiscal years with two exceptions: (1) there is an increase in the number of on-the-job training proposals; and (2) more training proposals are including basic education as a part of their program.

In summary, it may be stated that training under RAR is basically sound and is successful in accomplishing its purpose, which is to train unemployed and underemployed workers in economically distressed areas. There are three areas in the program in which the Department of Health, Education, and Welfare intends to take a greater leadership role: (1) promotion of training proposals; (2) evaluation of training programs; and (3) curriculum development.

EQUIPMENT COSTS

NATIONAL OVERVIEW FY 1963 - 1966

During the fiscal years 1963 through 1966, \$41,500,000 was appropriated to provide training in redevelopment areas under Section 241, Title II, Part "C" of the Manpower Development and Training Act of 1962, as amended. Of this appropriation, 41.66 percent (\$17,286,838) represented the Department of Health, Education, and Welfare's costs for training. Of the total appropriation 6.51 percent (\$2,701,111) was used for the purchase of equipment. Equipment costs were 15.63 percent of the total training costs for the four fiscal years.

A total of 48,644 people received training during the past four fiscal years. Of this total, 67.68 percent (32,926) of the people were trained in Regions II, III, V, and VII. These four regions also account for 63.73 percent (\$11,016,504) of the training costs; and 48.26 percent (\$1,303,445) of the costs for equipment purchase.

REG ION	RANK ORDER	TRAIINEES	PER- CENT	RANK ORDER	TRAINING COSTS	PER- CENT	RANK ORDER	EQUIPMENT COSTS	PER- CENT

\* Regions making up 67.68 percent of the people trained.

A study of the States' rank order listing in terms of the number of people trained, training costs, and equipment costs was made to determine if a geographic pattern existed similar to the regional pattern. Fifteen States accounted for 67.97 percent (33,064) of the people trained. Twelve of these States are in Regions II, III, V, and VII; the remaining States, Tennessee, Mississippi, and Alabama are in Region IV. The relationship between States and Regions which account for 67 percent of the number of people trained is illustrated in Table 6.

Thirteen States represent 69.23 percent (\$11,964,284) of the authorized expenditures for training costs. The majority of these States are in regions which account for 67.68 percent of the people trained (see Table 7). Again, Region IV is represented by the States

of Tennessee, Mississippi, and North Carolina. It is interesting to note that the States of Illinois, Oklahoma, and Alabama are included in those States in which 67.97 percent of the people were trained - but not among the thirteen States which account for 69.23 percent of the training costs.

A new geographic distribution exists when comparing those regions accounting for 67.61 percent (\$1,826,242) of equipment costs with those regions making up 67.97 percent of the people trained (see Table 8). Regions I and IX substitute for Regions III and VII; the regions thus accounting for 67.61 percent of the equipment costs are I, II, IV, V, and IX. A comparison of the rank orders of the States in Regions I and IX reveals that California ranks 26th in the number of people trained, 21st in training costs, and ninth in equipment costs. Massachusetts ranks 25th in the number of people trained, 16th in training costs, and fourth in equipment costs. Washington ranks 17th in the number of people trained, 14th in training costs and 10th in equipment costs.

## OCCUPATIONAL TRAINING PROGRAMS 1963 - 1966

During the fiscal years 1963 through 1966, 63.35 percent (30,816) of the trainees received institutional training in seven general occupational classifications comprised of twenty occupations.

CLASSIFICATION	TRAIINEES	PERCENT
Industrial Machine Operators	9,733	20.00
Health Occupations	7,891	16.22
Clerical Occupations	3,652	7.51
Agricultural Occupations	3,623	7.45
Industrial Production Occupations	2,463	5.06
Food Service Occupations	2,425	4.99
Automotive Service Occupations	<u>1,029</u>	2.12
TOTAL	30,816	

There has been a consistent demand for training during the past four fiscal years in such occupations as: Nurse Aide and Orderly, Welding, Machine Tool Operators, Clerk Stenographers, General Farmers, Cooks, and General Office Clerks. The demand for training in other occupations has been sporadic and/or on the decline.

The occupation in which the greatest number of people have been trained is Nurse Aide and Orderly; it ranks fourth in training costs and sixth in equipment costs. Machine Tool Operator ranks fourth in numbers of people trained, second in training costs, and first in equipment costs. Welding ranks third in numbers of people trained, first in training costs, and second in equipment costs.

The most significant revelation in the study of these training proposals is the range of hours for training in each of the occupations. Although some liberty has been taken to combine similar occupations, e.g. Nurse Aide and Orderly, under one heading, the backup material for this report confirms a great spread in hours for training in each specific occupation. While it is recognized that the time required for training is directly related to the needs of the employer and the characteristics of the trainees, it is felt that consideration should be given to the question of the need for minimum training requirements.

The obvious omission in this report is information on the evaluation of training that has taken place under RAR. Although there is some data available which indicates the number of people employed as a result of having received training, this office has not received evaluation reports on individual training programs. Reports on the number of people who are employed as a result of receiving training appears to be the only criteria used to evaluate training programs. Efforts will be made to develop an instrument for evaluating training programs and to promote, where needed, in-service programs.

## NATIONAL OVERVIEW FISCAL YEAR 1966

Fiscal year 1966 represents the year of change in RAR training. Perhaps the most significant change was the authorization to extend training allowances from 16 to 36 weeks. With this change came training proposals in more highly skilled occupations which led to longer training periods and purchase of more sophisticated types of equipment. The result of this change is reflected in the increased cost of training.

In fiscal year 1966, \$22,000,000 was appropriated for training as compared to \$6,500,000 in each of the three previous fiscal years. Institutional training costs in fiscal year 1966 were 36.17 percent of the appropriation as compared to 44.52 percent in fiscal year 1965; 48.02 percent in fiscal year 1964; and 50.52 percent in fiscal year 1963. The percentage of the appropriation devoted to institutional training costs has declined each fiscal year and reflects a total decrease of 14.35 percent from fiscal year 1963. (see Tables 1 and 2).

Conversely, equipment costs have steadily risen in the past four fiscal years. In fiscal year 1966 equipment costs represented 18.02 percent of the training costs as compared to 16.32 percent in fiscal year 1965; 14.40 percent in fiscal year 1964; and 10.58 percent in fiscal year 1963. The percentage of increase from fiscal year 1963 to fiscal year 1966 is 7.44 percent. It should be pointed out, however, that equipment costs in fiscal year 1966 represented only 6.52 percent of the total appropriation for that year. It is evident that equipment costs are not a large portion of the total costs for training. (see Table 4).

The total number of people who have received institutional training in the four fiscal years has not been constant. There were 12,998 people trained in fiscal year 1966; 10,217 in fiscal year 1965; 11,603 in fiscal year 1964; and 13,754 in fiscal year 1963 (see Table 3). Although the appropriation authorized for training under RAR increased from \$6,500,000 in fiscal year 1965 to \$22,000,000 in fiscal year 1966, the increase in the number of trainees was only 2,781 for that year. As a result of the authorization to increase the length of training time from 16 to 36 weeks for which training allowances might be paid, fiscal year 1966 training proposals were considerably longer in duration. This had the effect of limiting the number of people who could receive training in that fiscal year.

There were 2,252 people who received on-the-job training in fiscal year 1966. Although there have been many OJT proposals funded in the past four fiscal years, the first coupled on-the-job training proposal was funded in fiscal year 1966. The Department of Labor's costs for fiscal year 1966 were \$554,205 and costs for the institutional portion of OJT were \$47,072. This data is not reflected in other portions of this report. Since data was not readily accessible, a full accounting of on-the-job training under RAR during the past four fiscal years is not contained in this report.

STATES ACCOUNTING FOR 69 PERCENT OF THE NUMBER OF PEOPLE TRAINED UNDER RAR IN FISCAL YEAR 1966

TABLE 9

## NATIONAL OVERVIEW FISCAL YEAR 1967

The appropriation authorized for training under RAR in fiscal year 1967 is \$24,000,000. As of December 31 (FY 1967), \$9,578,941 or 39.91 percent of the appropriation has been obligated. Institutional training costs are \$3,074,855 which represents 32.10 percent of the expenditures. On-the-job training costs are \$666,535 or 6.96 percent and allowance costs are \$5,837,551 or 60.94 percent of the appropriation.

There have been 87 institutional projects two coupled on-the-job training and 15 regular on-the-job training projects funded in the first six months of this fiscal year. A total of 6,230 people are or have received training; 4,524 in institutional training; and 1,706 under OJT. The Bureau of Apprenticeship and Training is taking a more active interest in training opportunities under RAR as evidenced by the number of people in training thus far this year.

Equipment costs are \$384,409 or 12.50 percent of the training costs and supervisory costs are \$267,851 or 8.71 percent of the training costs. These costs appear to be following the trend established during the past four fiscal years.

The types of occupations for which training is being requested indicates similar employment needs to those in the past four fiscal years. There is an increase in the number of training proposals having basic education as a component of the training plan. There also seems to be a trend in the development of large multi-training proposals, particularly in those areas having skill centers.
